Vitamin C has been in the public consciousness for years; it became even more famous when the Nobel prize-winning chemist, Linus Pauling, began promoting it as a sort of universal cure-all.

At the IV Nutrient Treatment Center in Beverly Hills, we don't claim that Vitamin C can solve all your problems, but we DO believe that Vitamin C has an important place in the treatment and prevention of a variety of diseases. This belief is based on an ever-increasing body of scientific evidence.

Did you know that Vitamin C:

- Is required for your body to make serotonin and other neurotransmitters?
- Is anti-inflammatory, and a potent antioxidant?
- Supports the immune system?
- Helps in some neurological diseases?

What's so important about INTRAVENOUS Vitamin C? It's so much easier to take a pill!

- High dose Vitamin C given orally causes stomach upset and diarrhea (usually anything over 5 g/day causes problems).
- If you take megadoses of Vitamin C orally, not much is absorbed; most is excreted.
- IV administration results in much higher plasma and intracellular levels of Vitamin C than would be possible orally.

How much Vitamin C can be given safely via IV?

- Infusions of 10-20 g are given routinely. Doses of 100 g at a time have been given with no side effects.
- A small group of patients, particularly those of Middle Eastern descent, may have a genetic disorder called G6PD deficiency; those patients should not receive high-dose Vitamin C therapy. Therefore, we use a simple blood test to rule out this condition before initiating treatment.

Which conditions do we find we can treat effectively with intravenous Vitamin C?

- Cold and Flu - shortens both severity and duration of illness**
- Wound healing - very useful for post-cosmetic surgery cases**
- Depression - Vitamin C helps raise neurotransmitter levels**
- Fatigue - revitalizes, boosts energy; best in combination with B-complex vitamins**
- Allergies - Vitamin C has antihistamine properties**
- Certain neurological conditions**

We often give Vitamin C as a part of a combination intravenous nutrient therapy: Myers' Cocktail.

This allows us to take advantage of synergistic biochemical effects.

How can I find out whether IV Vitamin C therapy can help me?

Please call the IV Nutrient Therapy Center at 310-550-8000 or click to schedule a consultation. Our medical director will give you a thorough evaluation and then discuss the best treatment plan for your individual needs.
